The AutoLISP is based on Visual Basic for Applications and thus has the same programming style as the Microsoft VB for Application. The AutoLISP language is a member of the Lisp family, and the AutoLISP language was developed by a group of Australian programmers at Autodesk. It was later incorporated into AutoCAD in the version 9 release, however after some years it was decided to remove it from the product. AutoCAD's.NET support is the new development platform used by Autodesk in 2014. Unlike AutoLISP which was based on Visual Basic for Applications it is in the style of the Microsoft's C# language. The.NET implementation of AutoCAD uses the standard.NET Framework, it supports object serialization and the reading and writing of native AutoCAD data structures. ObjectARX ObjectARX is an object-based AutoCAD API. It is designed to simplify programming for CAD users and add additional CAD-related functions to software applications that do not involve CAD. ObjectARX and its underlying CoreARX architecture are an object-based extension to CAD. The design of ObjectARX is based on the Microsoft COM technology, and it is published by Prentice Hall. ObjectARX is a COM-compliant component and it uses the Open Type Library to implement its COM interface.
